Access Panels

IntexForms Access Panels

"Absolutely the best GRG access panel available."

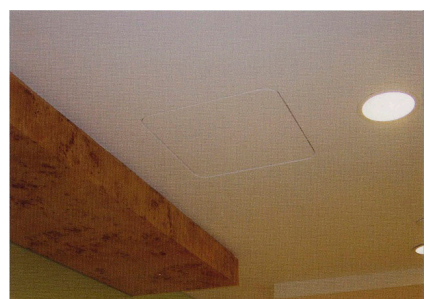

Radius

Square

The **GRG Access Door** and **Frame** was invented by **IntexForms** in the early 1990's. From the original four size offerings **IntexForms** now makes 100's of sizes from 6" to 120"

in round and square corner details, in gravity fit (lay-in) or hinged for downward access. All **IntexForms** panels are made and calibrated for 5/8" sheetrock. Our **Door Panels** are computer programmed to the frames, so that every panel fits in every orientation with even gaps on all sides, every time. IntexForms Frames include a wooden embedment so bugle head screws, or torque, do not fracture or crack the frames. Every access panel and frame is provided "paint ready."

IntexForms makes custom access panels easily and quick. Split doors, oversized, moist environments, sealed gasketed access doors. Locked and keyed access doors, round or oblong access doors.

Access Panels

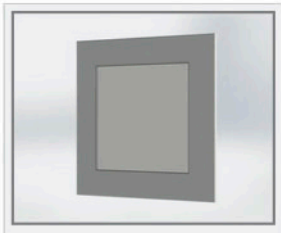

Two Types, Four Styles, in Any Size

IntexForms offers two types of panels, Lift & Shift and Hinged

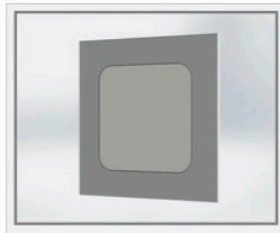

Lift & Shift

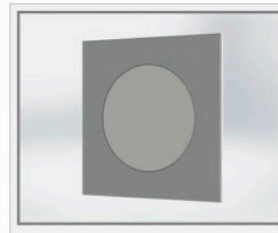

Hinged

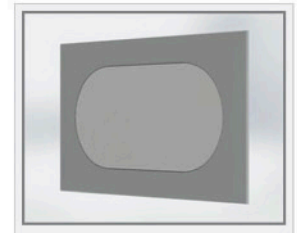

Square

Radius

Round

Oval

Hinged Panels are offered with three options:

Lock Options

Lock & Key

Slotted

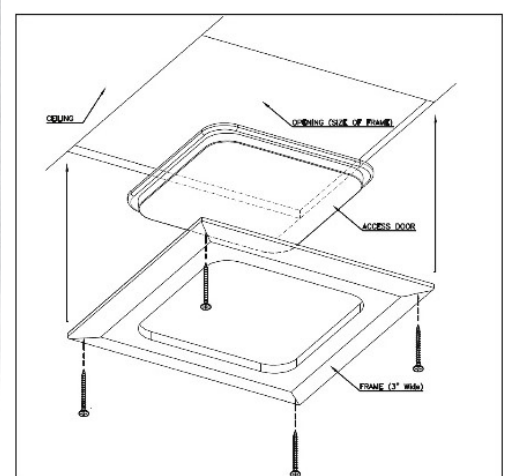

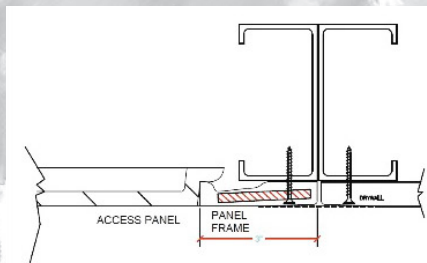

Magnetic

"Our panels are mounted as any drywall sheet gets mounted."

Instructions:

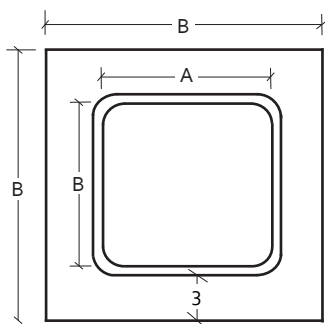

1. Mount Access Panel Frame to studs with #6 drywall screws.
2. Install surrounding drywall.
3. Tape joints, fill and sand smooth.
4. Apply desired finish.

Our commitment at **IntexForms** is to provide our customers with the highest quality glass-fiber reinforced products and the best customer service. We have available hundreds of stock molds for column covers (straight, tapered and fluted), capitals, bases, moldings, baseboards, light-coves and sconces. Our CAD department is equipt with the latest design software that can provide precise shop drawings required for your custom and standard shapes.

GFRG - Glassfiber Reinforced Gypsum Supplied for interior applications and requires field finishing. Installation procedure is the same as for GWB and is class A fire rated.

GFRC - Glassfiber Reinforced Cement Supplied for exterior applications and requires field finishing. Heavier than GFRG but lighter than precast, framing requirements are less than for stone or precast. Can be used for interior applications where durability and strength are required (high traffic/impact areas) and is also class A fire rated.

STONETEX Used for both interior and exterior, it has the appearance of stone but not the weight. Interior applications are supplied with matching grout for seams and patching. The exterior application requires the use of calk. It is class A fire rated.

ACCESS PANELS Our standard access panels are the standard and blend seamlessly into your sheetrock applications. With a long list of standard sizes available, they are also class A fire rated and can be custom sized to your specifications.
